

Appendix A

Objectives and Measures

Pavement Asset Management Plan

Agency Name: Boone County Highway Department

Contact Name: Craig Parks, PE – County Highway Engineer

Address: 1955 Indianapolis Avenue, Lebanon, IN 46052

Email: cparks@co.boone.in.us

Phone: 765) 482-4550

This pavement asset management plan was developed by the Boone County Highway Department in accordance with the requirements outlined by the Indiana LTAP. The Indiana LTAP Pavement Asset Management Plan was developed by representatives from LTAP, IACC, AIC, IACHES, ISC, Indiana City Engineers, and INDOT and is to be used to satisfy requirements for funding approval from FHWA, INDOT, or Indiana legislation mandates. The Plan requires local agencies to provide the following information on road and bridge assets, and a description of asset management and planning.

Document Prepared by:

Signed: 

Date: November 14, 2019

Road Asset Inventory

*The Boone County Highway Department is responsible for the maintenance of nearly 750 miles of roadways. Of those 750 miles of roadways, 430 miles are paved; the remaining 330 miles are gravel roads. Since 2016, the County Highway Department has performed an annual PASER condition rating on all of Boone County's paved roads and developed an inventory system that can be maintained and utilized to make future decisions in regards to pavement preservation and capital improvements. The results of the 2019 pavement condition ratings of Boone County's paved roadways are illustrated in and itemized, by segment, in Table 1 of the **Appendix**. Gravel roads are included in our inventory, but are not yet rated. We have 5 grader operators with territories in various parts of the county. Each operator maintains the gravel roads in their territory regularly.*

Pavement Preservation Surface Treatments

There are several different preventative maintenance treatments that can (and should) be used to extend the life of pavements. The selection of treatment is based on several different factors including, but not limited to treatment cost, pavement condition, traffic volume, facility type (rural or urban), road material (chip & seal, cold-mix asphalt, hot-mix asphalt) and age of the roadway.

*The following table outlines the various treatments considered for each PASER condition rating and the programming costs used for the development of our 5 year work plan shown in **Table 2** of the Appendix.*

PASER Rating	Proposed Treatment	Cost / Mile
10	No treatment necessary	\$0
9	No treatment necessary	\$0
8	Crack Fill	\$5,000
7	Crack Fill	\$5,000
	Rejuvenator	\$14,000
	Seal Coat (Microsurface – Single Course)	\$35,200
6	Seal Coat (Microsurface – Single Course)	\$35,200
	Crack Fill	\$5,000
	Chip & Seal (Single)	\$14,000
	Chip & Seal (Double)	\$25,000
5	Seal Coat (Microsurface – Double Course)	\$46,000
	Seal Coat (Microsurface – Single Course)	\$35,200
	Chip & Seal (Double)	\$25,000
	Non-Structural Overlay	\$155,000
4	CMA Structural Overlay (3")	\$75,000
	HMA Structural Overlay (4")	\$345,000
3	Full Depth Patching and CMA Overlay (4")	\$125,000
2	Full Depth Patching and CMA Overlay (4")	\$125,000
1	Reconstruction	\$500,000

Objectives and Measures

Performance goals and expected level of service for pavements.

In 2016, the Boone County roadway network had an average PASER condition rating of 4.757. The goal of the Boone County Highway Department is to maintain or improve the average condition rating of our paved road system. In 2017, the average PASER rating was 5.375 and in 2018 it is up to 5.908. Our average PASER rating for 2019 had a 3% increase from 2018 and is now up to 6.083. That is a 28% increase from our 2016 PASER rating.

Development of work plan.

The 2019-2023 work plan updated our previous work plans utilizing the PASER condition ratings acquired in the Spring of 2019. The department considered numerous surface treatments and identified the best surface treatment based on a combination of PASER condition, facility type, treatment cost and institutional knowledge of the highway system. The effect on PASER rating and life-expectancy of each treatment type was estimated based on industry knowledge to determine the overall change to the road network's conditions. Annual expenditures for each treatment type were chosen with the goal to improve the average condition rating of our paved road system. Our first established work plans, developed in 2016, focused efforts on maintaining roadways having a condition rating of 4-7 in order to prevent additional roadways from deteriorating to a level where reconstruction is necessary. In the later years of the plan, which we are now in, additional funding was identified for structural repair projects that improve roadways already at or below a rating of 3 rating on the PASER scale.

Monitoring program and plan for making updates and adjustments.

Our staff has been trained to perform PASER analysis and we re-evaluate our paved roads annually and documented in a GIS database system. In addition to pavement conditions, any work performed on a roadway will be maintained in this system, providing Highway Staff the ability to analyze the increased service life of many different surface treatments and forecast the deterioration of pavements based on a number of conditions. Every year, the Highway Department will provide a report which identifies the annual rating of each paved roadway and summarizes the overall change of condition of our paved road network. This additional information we collect and maintain will provide us long-term benefits and allow us to refine our annual work plans and make data-driven pavement management decisions. At some point, the Highway Department expects it will be necessary to integrate a specialized pavement asset management database system to assist the department in developing a holistic asset management program. The table below summarizes our PASER information in the first 3-years of our pavement asset management program. The benefits of our County's strategic investments to highway infrastructure in 2017 and 2018 are evidenced in the improvement of roadway conditions.

PASER Score		Miles of Roadway		
		2017	2018	2019
10	Excellent	13.58	20.112	25.703
9	Excellent	3.172	2.443	7.89
8	Very Good	39.947	62.944	57.508
7	Good	62.236	80.118	67.521
6	Good	60.004	76.277	115.401
5	Fair	100.475	75.08	50.852
4	Fair	81.335	65.717	55.306
3	Poor	45.615	26.65	25.221
2	Very Poor	16.408	9.409	8.769
1	Failed	0.597	1.698	0.504

Drainage and ROW conditions.

The vast majority of Boone County roads have shoulders and roadway drainage is generally achieved by way of open side ditches. These side ditches are often the only feature identifying the apparent road right-of-way. In addition to the side ditches, the Highway Department is responsible for the maintenance of 339 large culverts (48" to 20'-0") and thousands more small culverts. Large culverts are inspected and an inspection report is completed regularly, identifying the condition and outlining the necessary maintenance for each culvert. The Boone County Highway Department has an entire crew dedicated to the maintenance of our drainage system; every day, they are replacing culverts, improving side ditches and repairing broken field tiles. The estimated expenditure on culvert materials alone in the next 5 years (2019 – 2023) is \$1,500,000. In 2018, an additional category of information regarding drainage needs was gathered during the PASER analysis. Any road segment requiring ditching was noted and incorporated into our GIS database system. This additional information will be useful in guiding our decisions on where to focus our resources on additional drainage ditching.

Brush

Maintaining and managing vegetation along our roads and bridges plays a major role in the longevity and safety of the County's infrastructure. As vegetation grows, it can inhibit drainage in roadside ditches, prevent pavements from drying, and intrude in the visibility for motorists. All of these can cause significant issues in infrastructure safety and longevity. Therefore, in 2019, an additional category of information was gathered while the PASER analysis was being performed. Any road segment requiring brush cutting was noted and incorporated into our GIS database system. This additional information will be

useful in guiding our decisions on the locations we need to focus our resources on additional brush cutting and clearing.

Roadway Safety

Although pavement condition plays a major role in the overall safety of the Boone County Highway road network, there are many other factors that can affect the safety of overall system. Two systemic initiatives that Boone County plans to implement in the upcoming years are upgrades to traffic control devices such as signs and pavement markings. The Boone County Highway Department has recently completed, and continue to maintain, a countywide inventory and condition rating for our traffic sign assets. This inventory helps us develop and maintain a plan that outlines necessary improvements and identifies the capital investments necessary to make those improvements. Secondly, the vast majority of Boone County roads have no pavement markings to identify road centerlines or pavement edges. In 2019, a NPZ (No Passing Zone) Study was performed so the Boone County Highway Department can include pavement markings to all resurfacing projects in the future. Future annual budgets will include funding to maintain pavement markings on our roadways for our system, improving the safety of our roads. Boone County is currently in the process of developing a LRSP (Local Road Safety Plan) to help with our vision, to help all Boone County's transportation system to reach their destination safely.

Introduction

This Pavement Asset Management Plan is a major update of the original plan produced in 2017. A minor update was produced and approved by LTAP in 2018. The PASER Rating Maps and Spreadsheets have been updated, including work that was completed in 2019.

Pavement Asset Management Plan

This Pavement Asset Management Plan satisfies the HB1001 State funding requirements. Asset management is defined as an ongoing process of maintaining, upgrading, and operating physical asset costs effectively, based on a continuous physical inventory and condition assessment. In June of 2017, The Town of Whitestown conducted an initial inventory and assessment of its streets. In June of 2019 the Town reevaluated its streets, which included 66.36 miles. Breakdown of existing type of streets is as follows:

Asphalt Streets = 65.53 miles

Gravel Streets = 0.83 miles

Rating System Used

The nationally recognized Pavement Surface Evaluation and Rating (PASER) System was utilized in rating all the streets within the Town. This system rates any type of streetway based on pavement type. Asphalt, Concrete, Brick and Gravel surfaces each use a different PASER rating scale.

For Asphalt Streets, the PASER System uses a scale from 1 to 10. A rating of 1 is very poor and from a rating standpoint requires reconstruction. A rating of 10 is excellent and represents a street that has just been paved. A street can only receive a rating of 10 once. Streets are rated by identifying the worst distress. If the worst distress is limited to a single location, then this location is noted in the inventory as a spot improvement along with the cause of deterioration. The Asphalt PASER Data Collection Field Guide was used as a reference when driving the streets. The rating process was broken down into steps as follows:

Step 1 – Is the pavement new?

- If recently reconstructed may receive a rating of 10 (one time).
- If new but over a year old may receive a rating of 9.
- If pavement has been sealed, the highest rating can be an 8.
- If chip and sealed rate the same as asphalt pavement.

Step 2 – Are there any structural distresses?

- Any rutting of ½" or greater?
- Any longitudinal cracking in the wheel paths (make sure not utility)?
- Any alligator cracking?
- If the answer to any of these is yes, then the rating will be a 4 or less.
See PASER Field Guide.

Step 3 – Are there only age related distresses?

- Transverse cracking?
- Longitudinal cracking?
- Block cracking?
- Raveling, flushing, polishing, bleeding?
- Potholes and patches?
- Age related distresses will receive a rating between 5 and 8. See PASER Field Guide.

For Gravel Streets, the PASER System uses a scale from 1 to 5. A rating of 1 is very poor and from a rating standpoint requires reconstruction. A rating of 5 is excellent and represents a street in which little or no maintenance is required.

Figure 1A shows the 2019 PASER Rating Analysis for the entire asphalt road network. Figure 1B shows the 2019 PASER Rating Analysis for the entire gravel road network.

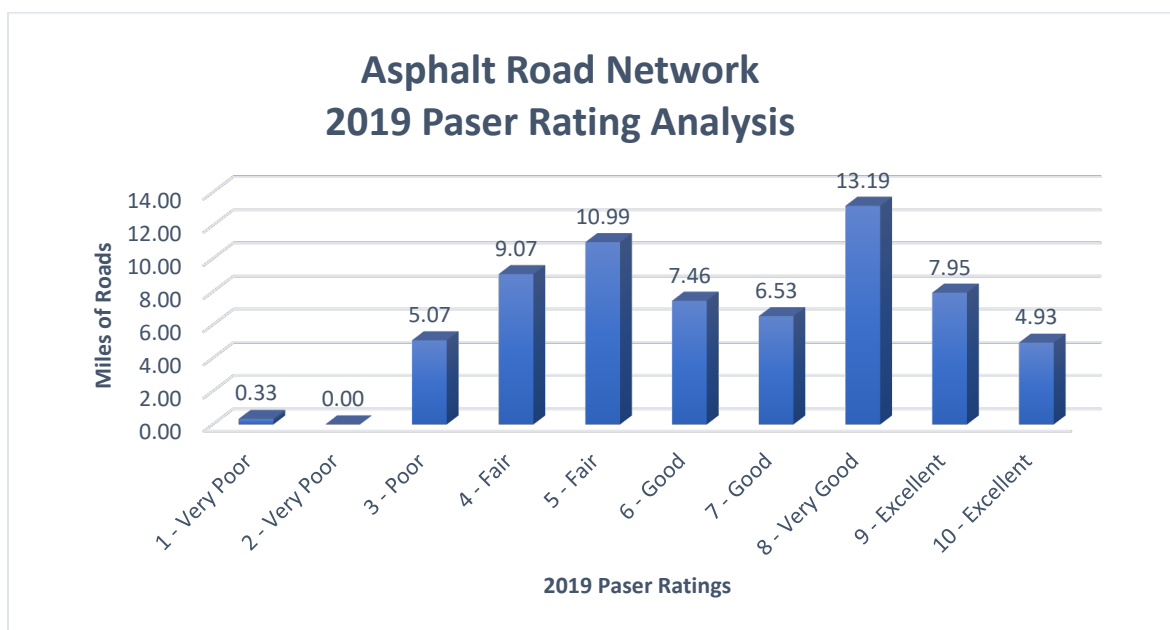

FIGURE 1A: Asphalt Road Network 2019 PASER Rating Analysis

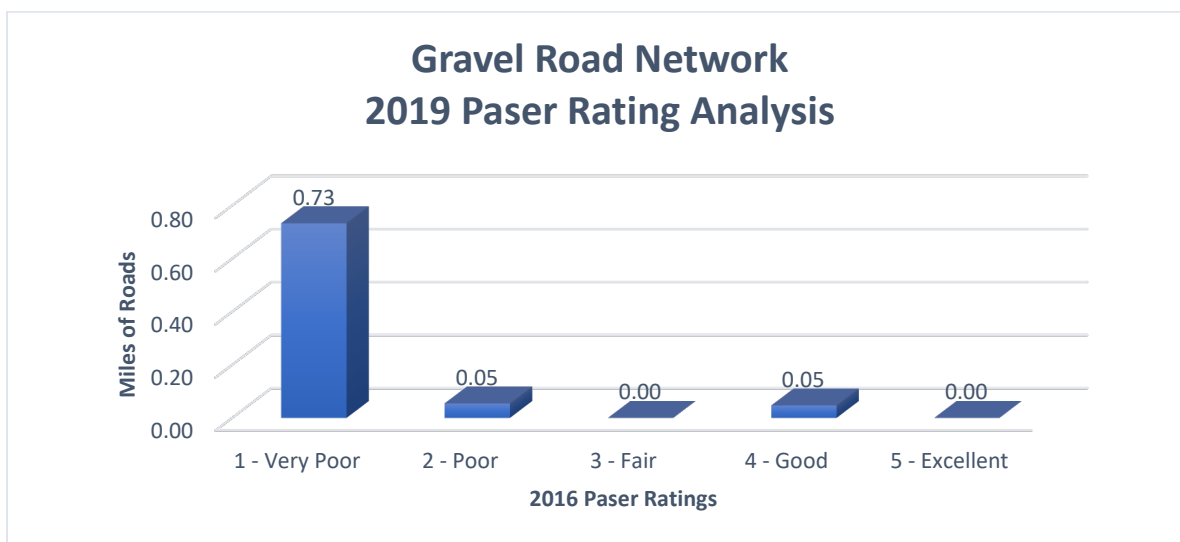

FIGURE 1B: Gravel Road Network 2019 PASER Rating Analysis

Process Used to Develop a Work Plan

Initial road data and county limits were obtained using ArcGIS. The road data was exported to an excel spreadsheet which included all county road names. Evaluation involved driving each road. Data was obtained for the road limits (from and to), road width, surface type and PASER rating. Road length was determined in GIS. Once the initial PASER rating was known, a treatment type and treatment year were assigned for each road. For asphalt roads, a rating of 4 is identified as the Critical Distress Point (CDP). The CDP is the point at which a road requires a structural treatment. A structural treatment would require a minimum of 2" of new pavement. Anything above the CDP (5 or greater) could require a preventative maintenance treatment. Figure 2A, shows the percentage of asphalt road network in relation to the CDP for 2019.

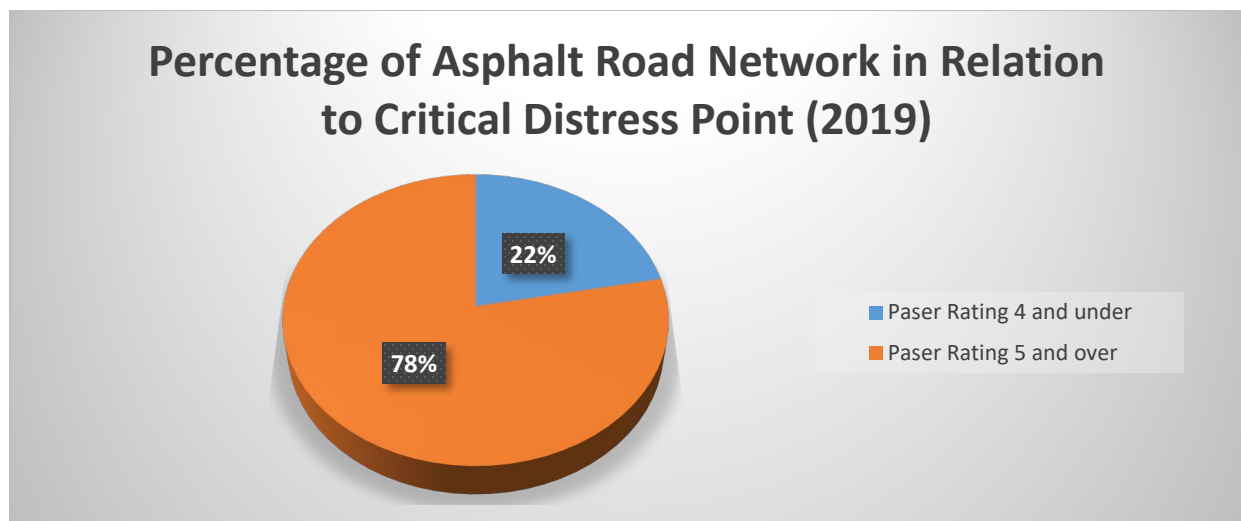

FIGURE 2A: Percentage of Asphalt Road Network in Relation to Critical Distress Point

Preventative maintenance treatments for asphalt surfaces are a cost effective way of getting extended service life from asphalt roads. Preventative treatments include crack seal, chip and seal, asphalt seal, microsurface or thin overlay. Structural treatments include an overlay greater than 2 inches with possible milling or patching depending on the severity of deterioration.

Figure 2B shows the percentage of gravel roads rated poor or worse in comparison to those rated fair or better for 2019.

Percentage of Gravel Road Network in Relation to Critical Distress Point (2019)

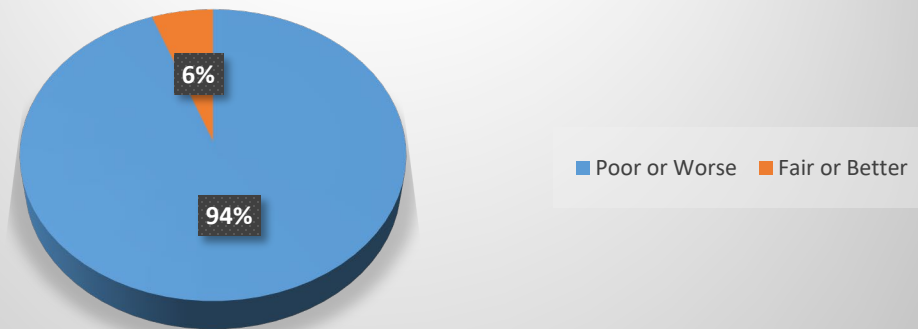

FIGURE 2B: Gravel Road Network Rating Comparison

For this assessment, treatment types for asphalt streets were assigned based on initial PASER ratings as follows:

2019 PASER Rating	Asphalt Surface Treatment Type
1	Reconstruct
2	>2" Overlay+Mill+Patch
3	>2" Overlay+Patching
4	>2" Overlay
5	Thin Overlay or Seal
6	Microsurface or Seal
7	Crack Seal
8	Crack Seal
9	Nothing
10	Nothing

Treatment types for gravel streets were assigned based on initial PASER ratings as follows:

2019 PASER Rating	Gravel Surface Treatment Type
1	Reconstruct
2	Gravel+Major Regrade
3	Spot Gravel+Minor Regrade
4	Routine Maintenance
5	Nothing

Dollar amounts were developed for each treatment plan. A treatment plan with corresponding year was assigned. Priority were also given to some streets over others based upon knowledge and judgment of the Town. In general, the philosophy used is to first use preventative maintenance measures on asphalt streets before they reach the CDP (rating of 4). Any street with a rating of 5 would be given a high priority for treatment. The thin overlay treatment or surface sealer would extend the service life of the pavement without requiring a structural treatment. Any street rated a 7 was also given a higher priority. These streets should be able to be crack sealed thus extending any need for a thin overlay treatment or a surface sealer. Streets receiving 6 were programmed for thin overlay treatment or a surface sealer. Streets receiving a rating of 8 or 9 were programmed in later years for crack seal. Streets just paved received a rating of 10 and weren't programmed for treatment at this time. Any street rated a 4 or less was programmed for a structural treatment. Gravel street treatment years were assigned by Town priority.

Monitoring Program and Plan for Making Updates and Adjustments

The Town's plan is to reevaluate the streets every 2 years at a minimum. By obtaining data that can be compared to previous evaluations we can confirm if we are getting the desired results and meeting our goals. We will also be able to continue to gain experience with the different structural and preventative maintenance treatments to determine life cycles and further refine our asset management plan and budget. It will also allow us to identify and closely monitor asphalt streets with ratings at 5 or approaching 5 where preventative maintenance can be used to prevent a structural treatment effectively saving dollars.

Drainage and R.O.W. Conditions

All ditches, curb and gutter, pipes and inlets should be kept clean and operational to prevent standing water on the pavement surface. Earth shoulders should routinely be inspected to make sure that they aren't higher than the pavement surface and therefore causing the pavement surface to pond water. Earth shoulders that are higher than the pavement edges can be graded to promote proper pavement drainage. This will greatly reduce the chances of rapid deterioration of the asphalt pavements.

All maintenance work required to maintain good drainage will be done within the existing right of way. If spot improvement locations are identified requiring additional right of way, the Town will work with the property owner to complete the improvement.

Agency Performance Goals and Expected Level of Service for Pavements

Asset management is a systematic method for routinely collecting, storing, and retrieving the kind of decision-making information needed to make maximum use of limited maintenance and construction dollars. Through pavement management we apply the right fix at the right time in the right place.

Preventative maintenance becomes a top priority. Rehabilitation is done when really needed and reconstruction only when absolutely necessary. Instead of applying a fix the worst streets first philosophy, we use a mix of fixes approach. Mix of fixes looks to maximize low cost fixes or preventative maintenance before the street requires rehabilitation or reconstruction.

The purpose of preventative maintenance is to continue to extend the service life of the asphalt street by using measures to keep the PASER rating at a 5 or higher. The goal for the Town would be to use this document and information as a tool to further improve upon the planning and budget amounts for our yearly paving and maintenance program. The statistics shown in Figures 1A through 2B show that we have still room for improvement. This document and information can help us get better. Our goal in the future is to or improve upon the percentage of asphalt streets above the Critical Distress Point. Over the next 6 years, asphalt streets rated a 4 or below will be considered for structural treatments. Streets rated a 5

or higher will be considered for preventative maintenance measures. We can also track the gravel streets. This pavement asset management plan will allow us to provide the right fix at the right time for the right street.

Pavement Treatment Summary Table

YEAR	PASER RATING	TREATMENT USED	ESTIMATED COST PER MILE	ESTIMATED MILES	ESTIMATED COST
2019	7-10	Crack Seal	\$15,456	6.53	\$100,926
2019	5-6	Microsurface	\$102,821	7.46	\$767,047
2019	3-4	Overlay - 2"	\$172,090	1.07	\$184,136
2019	1-2	Reconstruction - Asphalt	-	0.00	\$0
2019		TOTAL COST			\$1,052,109
2020	7-10	Crack Seal	-	0.00	\$0
2020	5-6	Microsurface	-	0.00	\$0
2020	3-4	Overlay - 2"	\$164,480	6.47	\$1,064,186
2020	1-2	Reconstruction - Asphalt	-	0.00	\$0
2020		TOTAL COST			\$1,064,186
2021	7-10	Crack Seal	\$31,460	13.19	\$414,952
2021	5-6	Microsurface	\$212,488	2.93	\$622,590
2021	3-4	Overlay - 2"	-	0.00	\$0
2021	1-2	Reconstruction - Asphalt	-	0.00	\$0
2021		TOTAL COST			\$1,037,542
2022	7-10	Crack Seal	-	0.00	\$0
2022	5-6	Microsurface	-	0.00	\$0
2022	3-4	Overlay - 2"	\$201,438	3.18	\$640,572
2022	1-2	Reconstruction - Asphalt	\$978,997	0.33	\$323,069
2022		TOTAL COST			\$963,641
2023	7-10	Crack Seal	-	0.00	\$0
2023	5-6	Microsurface	\$137,941	4.71	\$649,701
2023	3-4	Overlay - 2"	\$203,419	1.41	\$286,821
2023	1-2	Reconstruction - Asphalt	-	0.00	\$0
2023		TOTAL COST			\$936,522
2024	7-10	Crack Seal	-	0.00	\$0
2024	5-6	Microsurface	\$158,522	3.36	\$532,633
2024	3-4	Overlay - 2"	\$213,213	2.01	\$428,559
2024	1-2	Reconstruction - Asphalt	-	0.00	\$0
2024		TOTAL COST			\$961,192
		TOTAL 6 YEAR PLAN COST			\$6,015,192

TABLE 1: Pavement Treatment Summary

Aggregate Treatment Summary Table

YEAR	PASER RATING	TREATMENT USED	ESTIMATED COST PER MILE	ESTIMATED MILES	ESTIMATED COST
2019	4-5	Routine Maintenance	-	0.00	\$0
2019	3	Spot Gravel + Minor Regrade	-	0.00	\$0
2019	2	Gravel + Major Regrade	-	0.00	\$0

2024	1	Reconstruct	-	0.00	\$0
2024		TOTAL COST			\$0
		TOTAL 6 YEAR PLAN COST			\$74,162

TABLE 2: Aggregate Treatment Summary

Town of Zionsville

Pavement Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

The goals of the Town of Zionsville are two-fold; the primary goal is to maintain or improve the average rated condition of road segments. The secondary goal is to have all road segments rated at or above a PASER rating of 4, indicating that no structural deficiencies are identified. This latter goal is lofty, but is the level of service the Town will strive to achieve over the course of several years.

B. Define the Rating System.

The Town of Zionsville utilizes the PASER rating system. Currently this is anticipated to be updated in its entirety every two (2) years through the use of consultants. However, six (6) of the 13 staff members are trained in the PASER system, and in-house efforts in the future may supplement or replace outside consultants.

C. Describe the process used to develop a work plan.

The Town of Zionsville uses USI Consultants on a bi-annual basis to rate all locally owned roads. A shape file of the locally-maintained road inventory was provided to the consultant prior to evaluations to use as their baseline. This data breaks the roads into logical segments such:

1. An entire road segment by name for short roads
2. Intersection to intersection
3. Characterization changes such as obvious condition variants, widths, or composition

The length calculations were taken from existing GIS data. One flaw in this method is the calculation of centerline lengths runs only to the center of cul de sacs and is not representative of the entire road length that must be maintained. The widths of the roads were determined by a combination of aerial photography and wheel measurements when roads did not exist or were occluded in aerial photography.

The process for collection utilized ground-mounted video capture of all roads that were rated. Roads were surveyed and evaluated and noted while driving; subsequently the video was analyzed in a desk-top exercise to confirm or reassign a condition rating. When needed upon a confirmatory review of the videos, inspectors revisited any road segment in question for a final rating determination.

Describe the monitoring program and plan for making updates and adjustments.

Department staff continually monitor all roadways for unanticipated or egregious deterioration. As noted, six (6) staff members are trained in the PASER system to supplement the bi-annual evaluation by paid consultants to track pavement variations. All bi-annual PASER evaluations have been and will be imported into a GIS program used by department staff. All conditions and work done on public infrastructure is tracked on various GIS layers, providing desk-top indications of problem areas when a disproportionate amount of work or number of work orders is discovered in an area. The continued PASER evaluations, coupled with the work order history and the pavement treatment history will determine the prioritization of roadway segments and specific treatments in the future.

The ratings used in this report were collected in April and August of 2019. The standard schedule is to perform the rating in the April – May timeframe annually. However, roads are under construction at that time, so in these cases said roads will be evaluated upon the completion of those projects. Comprehensive road ratings will be updated wholly by May of 2021 following the bi-annual schedule.

D. Describe drainage and ROW conditions.

Approximately 78% of the Town's roads include curbs, so in the majority of cases drainage is managed and controlled in a traditional curb/gutter system conveyed to storm sewers. There are a few known storm sewer capacity limitations that result in short-term, localized flooding conditions during intense rainfall events. These identified locations are tracked in a separate GIS layer, and when a road segment is selected for repair, the storm sewer capacity is increased whenever practicable. Beyond storm sewer capacity issues, the remaining roads without a curb/gutter and enclosed drainage system drain to open roadside conveyances. In limited locations, shoulders need to be graded to provide optimal shedding of water from the pavement surface and protect pavement edges. The great majority of the Town's roadways lie within platted subdivisions, so rights of way of record are available and available in the Town's GIS. In these instances, roadway projects may expand the footprints of radii, sidewalks, curb ramps, storm sewer inlets and other appurtenances when appropriate to increase functionality and performance. In the occasion when no record of dedicated rights of way are found, road projects are confined to the edge of existing pavement, or prescriptive or apparent right of way. When necessary, the Town will obtain right of way either through easement or fee-simple acquisitions.

Hendricks County

Pavement Management Plan

Objectives and Measures

a Goals and Expected Service Life:

Hendricks County desires to achieve a PASER rating of 5 or above on all County Roads. The overall average PASER rating should increase each year. A life expectancy of 12-15 years for HMA pavement, 20 - 25 years for PCPP, and 7-8 years for Chip and Seal is a realistic goal for our traffic and climate conditions.

Hendricks County has no gravel roads.

b Rating System used

Hendricks County uses the PASER method of pavement condition analysis.

c Work Plan Development

Each year, County Highway staff members drive and inspect all County roads and evaluate each segment. That list is then placed in order of priority for maintenance or reconstruction. The priority is based on pavement condition, traffic counts, location, age of pavement, and construction and development activity in the area. The available budget is then compared to this list to determine what work can realistically be performed within the budget constraints for that year.

d Monitoring Program

See above

e Drainage and Right of Way

During the annual road segment inspections, note is also made of the condition of shoulders, roadside ditches, and the right of way in general. Notes are made of specific locations needing improvement. After the final paving list is developed and prior to paving activities, shoulders are bermed, failing pipes are replaced, and ditches that need work are regraded and cleaned out on all roads scheduled for improvements. These activities also take place as needed throughout the year on roads not scheduled for resurfacing or pavement maintenance.

Asset Management Plan – Brownsburg

Objectives & Measures

A. Define the agency performance goals and expected level of service for both pavements and bridges:

The town currently does not oversee or maintain any bridges within the city limits. The Town of Brownsburg's evaluation of the existing roadway system indicated an average PASER rating for the town of 6.21. After reviewing costs for maintaining the existing roadway average PASER rating, the town has indicated that the its goal is to perform \$2,000,000 per year in construction/maintenance for 5 years. The proposed plan shows that after an average contribution from the town of \$1,040,000 through the 2019-2023 construction years, the town's average PASER will be 6.81 in 2024. Extra maintenance in any construction year may be performed in order to maintain a higher PASER rating. INDOT has indicated that for each dollar spent on preventative maintenance, a municipality can save \$6 to \$14 on future repairs per their website. This strategy would be able to save the city on funding requirements in future pavement work and would eventually lower the tax burden to maintain roads within the city limits.

B. Define the rating system used:

The Town of Brownsburg used the PASER (Pavement Surface Evaluation and Rating) System developed by the University of Wisconsin-Madison Transportation Center to rate the pavement and create a pavement management plan based on the recommended treatments given in the PASER manual.

C. Describe the process used to develop a work plan:

The maintenance work plan created focused on both maintaining the existing good roads and maintaining the poor roads by selecting a few each year to pave to keep them at a PASER rating of 8 or higher. The strategy implemented focused on using the right strategy on the right road at the right time. Costs for these treatments were generated based on historic bids from other towns/cities in the State of Indiana such as Franklin, Avon, Monticello, and Seymour, as well as the INDOT unit price Summary. Treatment costs were then scaled up each year in the future with a 3% inflation factor. Budget was established at a maximum contribution of around \$1,000,000 per year from Brownsburg at the 2:1 match rate for towns with a population of more than 10,000. Map exhibits and tables were created to show what work will be necessary on which street segments for the next 5 years.

D. Describe the monitoring program and plan for making updates and adjustments:

The monitoring program includes a yearly check to ensure that the treatments projected in the 5-year plan are still relevant for the year the work is proposed. The entire roadway network will be reevaluated using the PASER system every 2-3 years to determine progress and ensure the network is responding according to the plan.

E. Describe drainage and ROW conditions:

Brownsburg's streets are platted and the town's Right of Way can be viewed on its GIS website: <https://beacon.schneidercorp.com/Application.aspx?AppID=329&LayerID=3593&PageTypeID=1&PageID=2329>. Drainage is currently served through curb and gutter with inlets that drain to streams in the area. Lincoln Dr from E Lincoln Avenue to the dead end was noted to be poorly draining during field inspection.

Town of Danville, Indiana

Pavement Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

It is the Town of Danville's goal to keep as many roads in fair condition and to keep as many roads in good condition by applying pavement preservation techniques. It is also part of the Town of Danville's goal to move as many poor roads to good condition through rehabilitation and reconstruction.

B. Define the Rating System

The rating system used to provide condition ratings for the roads is PASER. The PASER system was developed by the Wisconsin LTAP and is utilized statewide by local agencies in Michigan, as well as many others throughout the country. The PASER system is the system that is taught by the Indiana LTAP.

Asphalt PASER			Modified for Michigan TAMC Data Collection ◆ Denotes Priority Distress
Good	Asphalt 10 New construction No defects Less than 1 year old Only a "10" for 1 year <u>Recent base improvement</u> No action required	Asphalt 9 Like new condition No defects More than 1 year old <u>Recent overlay with or without a crush and shape</u> No action required	Asphalt 8 ◆ Occasional transverse crack >40' apart ◆ Crack width tight (hairline) or sealed Few if any longitudinal cracks at joints <u>Recent seal coat or slurry seal (*see below)</u> Action - Little or no maintenance required
	Asphalt 7 ◆ Trans. cracks 10'-40' apart ◆ Cracks open < 1/8" Little or no crack erosion Few if any patches in good condition <u>First signs of wear</u> Suggested Action Maintain with crack seal	Asphalt 6 ◆ Trans. cracks less than 10' apart ◆ Initial block cracking (6'-10' blocks) ◆ Cracks open 1/8" - 1/4" Blocks are large and stable Slight to moderate polishing or flushing No patches or few in good condition Slight raveling <u>Sound structural condition</u> Suggested Action Maintain with sealcoat	Asphalt 5 ◆ Secondary cracks (crack raveling) ◆ Moderate block cracking (1' - 5' blocks) ◆ First sign of longitudinal cracks at edge ◆ Cracks open > 1/8" Patching/wedging in good condition Moderate raveling Extensive to severe flushing & polishing <u>Sound structural condition</u> Suggested Action Maintain with sealcoat or thin overlay
	Asphalt 4 ◆ Longitudinal cracking in the wheel paths ◆ Rutting 1/2" - 1" deep ◆ Severe block cracking <1' blocks Severe surface raveling Multiple longitudinal & transverse cracks with slight crack erosion Patching in fair condition <u>First signs of structural weakening</u> Suggested Action Structural overlay >2"	Asphalt 3 ◆ < 25% alligator cracking (first signs) ◆ Moderate rutting 1" - 2" deep ◆ Severe block cracking (Alligator) Longitudinal & transverse cracks showing extensive crack erosion Occasional potholes Patches in fair/poor condition Suggested Action Structural overlay >2" Patching & repair prior to a major overlay Milling would extend overlay life	Asphalt 2 ◆ > 25% alligator cracking ◆ Severe rutting or distortion >2" Closely spaced cracks with erosion Frequent potholes Extensive patches in poor condition Suggested Action Reconstruction with base repair Crush and shape possible Asphalt 1 Loss of surface integrity Extensive surface distress Suggested Action Reconstruction with base repair

General TAMC PASER Rating Tips

Rate surface distress, not ride quality. Be aware of cracks in the wheel path, they can be hard to see and don't affect the ride.
Disregard the shoulder. Rate only the drivable pavement, edge line to edge line.
Do not ignore reflective cracks. Rate them by assessing the type of crack they are (transverse, longitudinal, alligator...)
Rate the current surface condition. If construction is in progress (work is active), but you are driving on the old surface, go ahead and rate the new surface. Some barrels sitting on the side of the road is not construction in progress.
Rate what you see, not what distresses you think might happen in the future.
Rate roads with the same scrutiny regardless of their use, ownership or functional class.
Rate the lane with the worst condition when lanes have differing conditions. For variable surface types, rate the worst lane, and select it as the Surface Subtype.
Crush & Shape - A treatment is considered a reconstruct only if the base material is replaced or rehabilitated.
Rutting - Look for visual cues such as plow scars. Get out and measure using a

straight edge and tape measure. Use caution!
Rutting Revisions - See page 8 of the TAMC PASER Training Manual for rutting measurement changes.
Composite Pavement - When a concrete pavement has been overlaid with asphalt (composite pavement) rate it based on the uppermost surface, in this case, asphalt; but note the surface subtype as composite.
Concrete Joint Repairs - The highest rating a repaired concrete pavement can receive is a 9. No other defects can be present and the condition is "like new." However, this is not what the Concrete PASER Manual says.
Sealcoat - See pages 6-7 of the TAMC PASER Training Manual for rating sealcoat pavements. Sealcoat applied over asphalt is a treatment. A sealcoat "road" is simply sealcoat over gravel.
***Proactive Sealcoat treatments** - Do not downgrade an Asphalt PASER 9 or 10 (no defects) to an Asphalt PASER 8 because of the treatment. Rate it based on the distresses that are visible (see page 9 of TAMC PASER Training Manual).

C. Describe the process used to develop a work plan

The Town of Danville created the road inventory by breaking the roads into segments using the following criteria:

- 1) From Intersection to Intersection
- 2) Where the width of the road changed or the number of lanes changed.
- 3) Where material type of road changed (ie. Asphalt, Concrete, Gravel, Seal Coat).

The lengths and widths of the road segments were determined from Google Earth.

The process for the collection of the condition ratings included a printout of our road inventory and writing the condition ratings as roadway was surveyed.

The condition assessment was performed by DPW Laborers, A. Plunkett and R. Whitaker. It took approximately 24 hours to perform the assessment.

D. Describe the monitoring program and plan for making updates and adjustments

In order to capture the rate of deterioration of the Town of Danville's roads as well as to capture the effectiveness of the pavement preservation treatments, the condition ratings will be re-evaluated on a mandatory 2-year basis. The ratings in this report were collected in February, 2019, and will be updated by February, 2021.

E. Describe drainage and ROW conditions

The Town of Danville's right-of-way (ROW) information is stored in our GIS system, Beacon/Schneider. Prior to any projects, the Town of Danville will acquire any additional ROW required to complete the project. During the project development phase, any drainage area in the project limits will be evaluated and addressed and corrected if needed during the design and construction phase(s).

The Town of Danville has limited ROW on most of the roads. Drainage on these segments is generally good with about 10% having poor drainage due to lack of ditches. Some of the segments have curb and gutter and drainage is adequate on these sections.

2019
ASSET MANAGEMENT PLAN

INTRODUCTION

The Town of Plainfield's 2019 Asset Management Plan represents an administrative update to include data through the first half of 2019. Improved roadways have been updated accordingly and roadways incorporated through new builds and annexations have been added with appropriate ratings. No significant variations in reporting have changed from the 2018 plan.

DEFINE PERFORMANCE GOALS

To utilize a map based data system (GIS) to formally track roadway condition, the performance maintenance activities, and to prioritize spending for various levels of reconditioning and replacement projects.

We continue to refine our maintenance activities, their effectiveness, and our spending priorities based on the ratings of our roads, but are guided by the following goals:

- Infrastructure Condition - Maintain a PASER rating of 6 or higher for all jurisdictional roadways
- Reconstruction/Resurfacing - Obtain 20 - 30 years of surface pavement life through periodic maintenance
- Safety - Achieve and document reduced traffic accidents related to pavement conditions
- Environmental Sustainability – Protect and reduce environmental impacts by extending the useful performance of the transportation system
- System Reliability - Improve or maintain the efficiency of the surface transportation system by reducing times residents are impacted by treatment efforts
- Cost Effective Solutions - Produce historical data to support goal achievements while maintaining or reducing unit investments in roadway preservation and maintenance

DEFINE PAVEMENT RATING SYSTEM

We utilize the PASER rating system for Roads (Asphalt, Composite, Concrete and Gravel). We are scheduled to re-rate every 2 years, with the next full system rating scheduled to occur in 2020.

The PASER scale is a 1-10 rating system for road pavement condition developed by the University of Wisconsin-Madison Transportation Information Center. PASER uses visual inspection to evaluate pavement surface conditions.

PROCESS TO DEVELOP TREATMENT PLAN

A cost-effective treatment in a timely manner can restore the pavement, almost to the original condition. Likewise, avoiding continual and costly patching and sealing on roadways that need replaced can reduce overall long-term expenses.

Using the PASER system, we have real data to plan a more effective maintenance and replacement program that can suggest the appropriate treatment at the most opportune time for each roadway. Preferred improvements are determined and scheduled each year. Identified treatments are recorded for each roadway performed. Improvements may include full reconstruction, full-depth reclamation or FDR, targeted patching, surface mill and repave, surface seals or rejuvenator products, or crack sealing. Bi-annually, these roadways are resurveyed to receive updated PASER ratings. The historical data of treatments and PASER rating changes will be used to continually alter our best practices to provide cost effective solutions.

Plainfield is also investing in striping to help maintain and improve roadway safety. While still considering preferred methods for reporting on condition, need, and benefits, annual budget allocations (in addition to areas receiving roadway treatments) are targeted towards specific high volume or worn roadways where striping provides critical information for drivers.

MONITORING PROGRAM

Currently, the Town schedules PASER ratings to occur bi-annually. A full rating assessment was performed in 2018 with the next scheduled survey to occur in 2020. Roadway treatments and the timing of those treatments are recorded for comparison to PASER rating improvements and degradation curves.

Table 1 represents the Town's complete roadway system broken into segments, each being given a PASER rating. Table 2 represents the approximate values of improvements the Town expects to complete over the following 5-year period.

DRAINAGE AND RIGHT-OF-WAY CONDITIONS

Though not specifically quantified, many of the Town's roadways have storm collection systems in place beyond roadside ditches. Plainfield DPW owns and operates both a street sweeper vehicle to keep gutter lines clean and a jet truck to clean storm water pipes that may become blocked or restricted. Roadway edges where curbing is not present are often edged with stone to maintain positive drainage and increase safety by reducing a dropoff.

CONCLUSION

The Town of Plainfield views its 171+ miles of centerline roadways as a significant investment to be protected and maintained. Asset management has been a common practice for the Town over many years. Recent developments and investments in technology are providing more efficient and more accurate methods for performing and reporting these efforts and the Town will continue to pursue more efficient methods for benefitting its residents.
