Appendix A
Objectives and Measures

HAMILTON COUNTY HIGHWAY DEPARTMENT
OBJECTIVES AND GOALS

Hamilton County Performance Goals

The Hamilton County Highway Department strives for safe, accessible and efficient roadways by continuing to improve the transportation infrastructure for the citizens of Hamilton County. This is accomplished by:

- Keeping an inventory of all local roads and streets.
- Performing an annual evaluation of the pavements of all roads within the inventory.
- Use the condition evaluations to set priorities for projects and select alternative treatments
- Identifying average daily traffic counts on primary and secondary arterials.

Expected Level of Service

Hamilton County strives to maintain our roadway system at or above an average PASER rating of 6.5. A rating of 6.5 would show little or no raveling, little cracking and pavement would just be showing signs of traffic wear. Treatment for this rating would consist of crack sealing or a seal coat. We anticipate an average service life of 15 – 20 years before a major treatment option would need to be considered.

Pavement Rating System

The Hamilton County pavement evaluation program utilizes the PASER (**PA**vement **S**urface **E**valuation and **R**ating) Manual developed by the University of Wisconsin – Madison. The PASER Manual categorizes asphalt and concrete pavement surfaces by a numerical rating system from one to ten. A road rating of one indicates a pavement with severe distress and with extensive loss of surface integrity. While a ten rating represents a pavement in excellent condition with no visible distress.

Pavement Monitoring System

Hamilton County has developed an extensive road inventory database. This system consists of segmenting the roadways into average lengths of one mile or less. Each segment is then given an identifier number and is described by road name, starting point, ending point, segment length, average road width, map grid and Township. Every segment in the County inventory is evaluated annually. This evaluation consists of pavement condition, prioritization for crack sealing, shoulder condition and drainage.

By performing our segment evaluations on a yearly basis, we are able to track the deterioration of our road system and anticipate current and future treatment needs and funding.

HAMILTON COUNTY HIGHWAY DEPARTMENT
OBJECTIVES AND GOALS

Work Plan Development

Our plan development is separated into two main plans:

5 Year Plan - We determine a treatment for our roads based on five major categories.

- Preventative Treatment (Crack Sealing**) – A minimum of 10% of all roads with a PASER rating of 8 or above will be addressed annually.
- Minor Repair Treatment (Chip Seal/Seal Coat**) - A minimum of 20% of all roads with a PASER rating of 6-7 will be addressed annually.
- Moderate Repair Treatment (Mill & 1 ½" Fill**) - A minimum of 5% of all roads with a PASER rating of 5-6 will be treated annually.
- Major Repair Treatment (Mill and 2" Fill w/Full Depth Patching**) - A minimum of 50% of all roads with a PASER rating 3-5 will be treated annually.
- Reconstruction (Full Depth Recycle with 6" Overlay**) - 100% of all roads with a PASER rating less than 3 will be treated annually.

**Actual treatment in each category may vary depending on several factors including, but no limited to, road classification, average daily traffic (% of truck traffic), and future area development.

2 Year Plan – This plan is developed annually. In this plan, we identify those actual segments that will be treated within the following two years. It is at this stage we will set a priority and evaluate the exact type of treatment used per road segment based on the actual conditions, road classification, ADT, future development and funding availability. A road segment cannot be removed from a two year plan once it has been identified. However, the second year of this plan is fluid and may need to be adjusted.

Plan for Adjustments and Updates to the Program

Annual evaluations of our roadway system allows us to make adjustments to our program.

Five Year Plan (Annually Updated) - Provides a means to determine the overall PASER rating for our roadway system. Adjustments are made to determine the percentage used for each of the five major categories to maintain or improve our overall PASER rating and funding required to achieve that goal. The five year plan is used for planning and programming.

Two Year Plan (Annually Updated) – Used for fine tuning of candidate road segments based on current PASER ratings and budget constraints. Funding plays a major role in this plan. Roads originally identified for the current year may be moved to the next year to accommodate a road with a shorter service life and therefore a higher priority. This plan is used for contract development based on approved budget. It is also used to direct in-house maintenance work.

HAMILTON COUNTY HIGHWAY DEPARTMENT
OBJECTIVES AND GOALS

Drainage Conditions

The Hamilton County highway system consists of both closed and open drainage (side ditch drainage). Extensive coordination with the Surveyor's office is frequent to assure regulated drains are sufficiently sized and maintained to support outlets from the roadways. Storm water drainage systems are also frequently coordinated with the Surveyor's office. Routine maintenance is ongoing with needed shoulder clipping, side ditch and catch basin cleaning done on an as needed basis. Deteriorated cross pipes are routinely replaced. Pipe replacements, and other drainage work, is investigated prior to paving and needed work is done by county forces or included in the paving contracts.

Right-Of-Way Conditions

The Hamilton County right-of-way conditions varies widely from rural conditions to urban conditions. The right-of-way in rural areas is typically described from edge of pavement to edge of pavement with open ditches and little to no clear zone. Some platted right-of-way can also be found in these areas. Shoulders within the rural areas varies from an aggregate shoulder to paved shoulders.

Urban areas mainly consists of platted right-of-way with curbs and a closed drainage system. Curbs within these areas may vary from a 4" roll curb to an 8" curb and gutter. Typically there is sufficient clear zones within the urban areas.

The platted right-of-way within both rural and urban areas will vary, with a minimum 50' total right-of-way width.

Objectives and Measures

A. Maintain the city infrastructure street asset system in state of good repair. While improving safety and improve system efficiency and performance.
B. PASER rating system.
C. Work planning is based on measurements made by persons visually inspections from a moving vehicle or by walking road segments. Pavement quality rating is assigned based on pavement quality measures on road sections using the PASER system. Recommendations are towards predictive maintenance, rather than allowing a road section to degrade to a point of reconstruction.
D. Annual monitoring by visual inspections of each road section to ascertain conditions related to wear from traffic and weather. For making updates and adjustments to road ratings.
E. Drainage and ROW conditions are maintained to city standards. With visual inspections from a moving vehicle or by walking.

Town of Cicero
Pavement Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

A key component to any kind of planning process, whether it is a retirement plan or an exercise work out plan, is to set some goals, performance measures, or targets.

The Town of Cicero has established a set of goals to utilize as a baseline to measure the impact the outlined priority projects will make in our community. Those goals include:

1. Reduce the amount of poor roads by 25% over the next 10 years. We have been successful in this to date with the help from the funding available through the State and our own Town funds.
2. Update and maintain the Inventory and Condition ratings to develop a Pavement Management System that will provide a systematic mapping system to extend the life of the town's roads and pavements. We have this in place and this is how we determine our priority projects for the year.
3. Through pavement preservation practices, move as many roads that are in poor condition to good condition over the next 10 years. We have been successful over the last 3 years because the additional funding has allowed us to preserve more roads than we would have been able to prior.

B. Define the Rating System.

Define the pavement rating system. Somewhere in your narrative, how your roads where assessed should be explained. Some agencies even copy and paste what the descriptions of the ratings here as well.

The rating system used to provide condition ratings for roads is a combination of what the Town of Cicero developed and the PASER system. Each year our Streets Superintendent travels on each road within the community to check on the overall condition of the road. Depending on the type of winter we experience the overall condition may be worse than typically anticipated from year to year. He checks the stress of the roads, which ones need full mill and paving, which ones need crack seal to lengthen the life of the road, and to check on the recently completed roads to check on soundness of materials used, etc.

C. Describe the process used to develop a work plan.

This section should describe how and why the segments of roads where created and the process for the data collection. Ideally a new staff member could read this section and know what they need to collect the data in the future as well as be able to recreate the road inventory if needed.

The Town of Cicero created the road inventory utilizing LTAP's PASER Program. Through this program the Town of Cicero created the road inventory by breaking the roads into segments using the following criteria:

1. From intersection to intersection
2. Where the width of the road changed
3. Where material type of road changed (ie. Asphalt, Concrete, Gravel, Seal Coat).

The roads were broken down into segments from intersection to intersection. The length and the width of the road segments were determined by tape measuring and followed up by GIS to map.

The process for the collection of the condition ratings included a print of our road inventory and writing the condition ratings as we surveyed each road. We inputted the rating by using our laptop and putting the condition ratings right into our GIS map for each segment.

D. Describe the monitoring program and plan for making updates and adjustments.

An Asset Management Plan is a living and breathing document that needs to be updated periodically. This section is intended to describe the methodology in updating the condition ratings, the 5 year plan, and the objective and measures. An agency could develop different rating schedules for different routes. Primary roads or roads with high ADT's could be rated more frequently than an agencies local roads…

The Town of Cicero reviews the Asset Management Plan each year to access the effectiveness of the pavement preservation treatments, to establish a baseline in which to measure the progress, and to determine if the objectives and measures need to be amended. The Town re-evaluates the condition ratings on a yearly basis to again record a baseline for measurement and to see how the preservation of the Town's roads are holding up. All of this is done in house by our Streets Superintendent and his staff. In the past adjustments have had to be made because our winter has been harder on our roads than anticipated.

E. Describe drainage and ROW conditions.

Part of House Enrolled Act 1001 required asset management plans to include drainage and ROW. This could be done in a general statement or with each segment of road.

The Cicero Utilities and Street Department have the Town's Right of Way (ROW) located in their office. The Town of Cicero has the needed ROW for all of the roads on our Asset Management document and inventory.

If there comes a time our projects are outside of our current roads, we will acquire any additional ROW required to complete that project. During the development phase, any drainage area in the project limits will be evaluated and addressed and corrected if need be during design and construction. Drainage on the roads we have within our inventory is

generally good with only about 5-7% having poor drainage due to the lack of ditches. Some of the segments have curb and gutter and drainage is adequate on these sections.

City of Fishers
Pavement Asset Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

It is the general desire and goal of the City of Fishers to maintain and keep as many roads in fair condition or better. Through routine maintenance and pavement condition management, this will help ensure that Fishers infrastructure dollars are invested wisely. Through routine maintenance it would be the goal to keep as many roads in fair condition in fair condition and keep as many roads in good condition in good condition by applying pavement preservation techniques. It is also part of the City of Fishers goals to move as many poor roads to fair or good condition through rehabilitation and reconstruction. Over each five-year rolling period, it would be the desire to move 15% of road segments aggregated ratings from Poor to Fair and from Fair to Good.

B. Define the Rating System.

The rating system used to provide condition ratings for the roads is PASER. The PASER system was developed by the University of Wisconsin at Madison and Wisconsin LTAP; it is utilized statewide by local agencies in Wisconsin, Indiana, Michigan, as well as many other states throughout the country. Technical use of the PASER system is taught locally by Indiana LTAP, of which Fishers has had many attendees in the last two years. The rating system sets criteria that can be established by visual ratings from 10 being a newly constructed road in best condition to 1 which constitutes a roadway failing and at the end of its serviceable life.

C. Describe the process used to develop a work plan.

The City of Fishers created its City Road Inventory by breaking the roads into segments using the following general criteria:

1) From logical termini to termini, typically from Intersection to Intersection
2) Where material type of road changed (i.e. Asphalt, Concrete, or Seal Coat)
3) Where number of lanes has changed or there is a clear, definitive transition of pavement width

The lengths of the road segments where determined from utilizing existing available city mapping (GIS) or by field review and field measurement.

The material type was collected by field review.

The number of lanes/pavement width was gathered by field review, past plan information and, GIS measurements.

The process for the collection of the condition ratings included the use of our ArcGIS Collection PASER App on iPads.

D. Describe the monitoring program and plan for making updates and adjustments.

In order to capture the rate of deterioration of the City of Fishers roads, as well as to capture the effectiveness of the pavement preservation treatments, the PASER condition ratings for all segments City-wide are evaluated at least twice per year, typically at least once in the Fall and once in the Spring. These inspections are conducted by PASER-trained staff, as well as with an eye on other Department input related to roadway condition and need. As new roads are constructed in Fishers, the road inventory is adjusted as needed annually via updates audited by INDOT.

E. Describe drainage and ROW conditions.

The City of Fishers Right-of-Way (ROW) information is stored in our GIS system. For specific widths and locations please refer to our GIS map. Prior to any project, the City of Fishers will acquire any additional right-of-way required to complete the project. During the project development phase, any drainage area in the project limits will be evaluated and addressed and corrected if need be during design and construction with respect to water quantity and quality in accordance with our local stormwater ordinances.

CITY OF NOBLESVILLE
ASSET MANAGEMENT PLAN
POLICY AND GUIDELINES FOR ROADS AND STREETS

A. FIXED ASSET MANAGEMENT

- **a.** As-Builts shall be obtained per City GIS standards for all new platted subdivisions approved by the Board of Public Works.
- **b.** Annexations: All fixed assets for roadways acquired by the City shall be obtained, cataloged and entered in the GIS inventory after the effective date of the annexation and before January 1st of the following calendar year.
- **c.** Street and roadway fixed asset inventories shall be totaled and inventories shall be finalized prior to December 31 of each year for incorporation into the City's fixed assets.
- **d.** Roadway mileage shall be updated by December 31 or each year for submittal to the Indiana Department of Transportation for the certification of roadway mileage inventory.

B. RESURFACING AND CAPITAL PROJECTS

- **a.** Resurfacing projects shall consist of the repair and rehabilitation of pavement and associated infrastructure within existing right-of-way. Typical resurfacing projects include inlet and curb repair; cold-milling of existing surface; and base repair within the existing footprint of the roadway that does not exceed 30% of the existing roadway area. In areas where the existing edge of pavement is the right-of-way line, pavement may not be placed beyond the existing edge of pavement.
- **b.** Capital projects shall consist of the reconstruction of existing roadways or the construction of new roadway to the existing inventory. Any project that requires off-site improvements which require the City to purchase additional right-of-way shall be considered a capital project.

C. MANAGEMENT OF ASSETS AND INVENTORY

- **a.** Condition ratings for all City streets and roads shall be assigned using the "PASER" system of condition rating.
- **b.** Any new road dedicated to the City by a new development or newly constructed road completed by the City shall be inventoried as previously described and receive an initial inventory rating of "10" based on the PASER rating system.
- **c.** All streets and roads shall be rated on no less than a biennial basis.
- **d.** Roadways which are selected for potential resurfacing which do not make the final annual program, shall be re-evaluated the following year.
- **e.** Any street or roadway which has a PASER rating of 4 or lower shall be evaluated on an annual basis.
- **f.** Drainage problems or poor curbing shall be noted on the rating form on a case-by-case basis.
- **g.** Any project that requires drainage improvements which are a capital cost, upgrade, or require right-of-way shall be considered a capital project and not eligible for direct resurfacing funding.
- **h.** ADA facilities shall be upgraded and brought into compliance for any resurfacing projects and all capital projects.
- **i.** The final annual resurfacing program should be based on a combination of PASER rating and an aggregate location of local streets which minimize mobilization costs throughout the city.
- **j.** The PASER rating for each roadway segment shall be maintained in the City's GIS database as a roadway attribute.
- **k.** Condition ratings for all resurfaced streets shall have PASER ratings updated and entered into the City's GIS database.

City of Westfield
Pavement Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

A key component to any kind of planning process, whether it is a retirement plan or an exercise work out plan, is to set some goals, performance measures, or targets. Ideally "Performance Goals" and Target Levels of Service" are measurable so one can track progress towards them or away from them.

It is the City of Westfield's goal to keep good roads good and repair the bad roads along the way. Our mind set is NOT a worst to first mentality. We must extend the life of our pavements by applying the proper maintenance techniques at the appropriate times so that our roads do not get to the point of total reconstruction. Our current assumption with the insane amount of construction we have, is that we can get an 8 to 10-year service life out of a mill and resurface project before we have to repeat that process on the same stretch of a thoroughfare road. We are continually tracking and monitoring each of our maintenance techniques on each roadway to evaluate effectiveness and service life.

B. Define the Rating System.

Define the pavement rating system. Somewhere in your narrative, how your roads where assessed should be explained. Some agencies even copy and paste what the descriptions of the ratings here as well.

PASER rating system is used to evaluate the roads in Westfield. We have used this system at least since 2009. This is a 1-10 rating system. The higher the number, the better the road. Each number has specific requirements. These requirements can easily be obtained with a quick search on the internet and in City files (available upon request). The PASER system was developed by the Wisconsin LTAP and is utilized statewide by local agencies in Michigan, as well as many others throughout the country and is the system taught by the Indiana LTAP.

C. Describe the process used to develop a work plan.

This section should describe how and why the segments of roads where created and the process for the data collection. Ideally a new staff member could read this section and know what they need in order to collect the data in the future as well as be able to recreate the road inventory if needed. This section should also describe any resources used, software, number of people it took to collect the condition ratings and the amount of time.

Reference attached User Manual.

The City of Westfield created the road inventory by breaking each road into a segment at every intersection with another road. The GIS coordinator provided this breakdown and it

was verified in the field. The widths of the roads were also provided by the GIS coordinator and verified via our GIS map and knowledge of our current and past road cross sections.

The process for collecting the condition ratings includes printing out the asset plan, driving, and evaluating each road with at least 2 people. It usually takes about 4 full days to evaluate and rate every road in our network. Our asset management plan is housed in a Microsoft Excel spreadsheet.

D. Describe the monitoring program and plan for making updates and adjustments.

An Asset Management Plan is a living and breathing document that needs to be updated periodically. This section is intended to describe the methodology in updating the condition ratings, the 5 year plan, and the objective and measures. An agency could develop different rating schedules for different routes. Primary roads or roads with high ADT's could be rated more frequently than an agencies local roads. This section should describe when the next time the ratings need to be conducted as well as describe the interval in performing the condition assessment.

The City of Westfield evaluates every road twice a year. Once in the fall to prepare for the upcoming year, and once after winter time to make sure the plan established does not need adjusted. Updates to the plan are needed throughout the year as new construction and maintenance takes place. The process for updating this data is complex and has many moving parts. Reference attached User Manual for further details.

E. Describe drainage and ROW conditions.

Part of House Enrolled Act 1001 required asset management plans to include drainage and ROW. This could be done in a general statement or with each segment of road.

The City of Westfield's Right of Way (ROW) information is stored in our GIS system. For specific widths and locations please refer to our GIS map. Prior to any project the City of Westfield will acquire any additional ROW required to complete the project. During the project development phase, any drainage area in the project limits will be evaluated and addressed and corrected if need be during design and construction.

Drainage is an issue for the City with the flat natured topography. Many of our drainage problem areas get solved as development continues to increase throughout our community. We work with our storm water coordinator to come up with drainage solutions and solve issues as they arise.

Maintenance Priority User Manual

Yearly Planning			Updating Throughout the Year		
GENERAL			**Doing this will save you days of work in the winter time**		
Check Box	Step	Description	Check Box	Step	Description
	1	If you are going to alter the document, always copy the existing file before you open it, and move the copied file to the archived folder. Then re-name the file with today's date, and then open the file.		1	If you are going to alter the document, always copy the existing file before you open it, and move the copied file to the archived folder. Then re-name the file with today's date, and then open the file.
	2	Make sure all data was updated for previous year's maintenance and resurfacing.		2	Once your resurfacing project is complete, update your paser rating, drainage rating, and set your next recommendation. Never delete the data from that year's projection column so that you have historical data. Simply change the color of the cell to white so that you know that it is complete.
	3	At the end of the year before it snows, drive every road and update the Paser Rating, Drainage Rating, and Recommendation. Easiest way is to drive all the thoroughfares (takes about 6 hours), then drive all the residential. Two person job. Review and take with you the Paser Rating Manual so there are consistent evaluations. I found it easier to print out the sheets and hand record the data because you are recording data at a fast pace. Then I would come back to the office to enter the data in the spreadsheet. *TIP* Sort by subdivision before you print out the sheets to take with you!		3	Verify the traffic volume column after you perform traffic counts.
	4	Schedule a meeting with the director of PW to go over what you think needs to be completed this year. You guys may end up going on a drive so he gets a visual of what will be presented to the Mayor.		4	Keep up on City Council Agendas so that you know if we annex any land that we will now be responsible for maintaining new roads. Add these roads to your spreadsheet.
	5	Gather this years roads with type of maintenance/repair and cost to present to the Mayor. Give him all the options for resurfacing for this year. You do not need to give him any maintenance options (ie. Crack seal, preservative seal, infrared,…).		5	If the Thoroughfare Plan is altered, you will have to verify the classification of all the roads.
	6	After you get direction from the Mayor, adjust your data accordingly.		6	When Project Management completes a new project, make sure you update your spreadsheet. Could be a brand new road or just updating paser/drainage ratings/road width.
	7	Bid project. Typically an April letting date. Back track from the BPWS meeting you want them to accept your recommendations to find out when to advertise. I like to give myself a week and a half or two before the BPWS meeting for my bid opening date. Then three to four weeks of the bids being advertised. You have to advertise twice, same day of the week, a week a apart (ie. advertise on Monday then the following Monday). Call contractors to let them know you put a bid out.		7	Trigger for new developments: When the performance bonds are flipped to maintenance bonds by the BPWS, I will add those roads (typically just residential) into the spreadsheet. This is how I was making sure that I did not miss any of the new development roads. This also helps so that you do not have to add new roads to your list when you are evaluating them. This may require you to break a stretch of road into 2 seperate roads if the development installed an entrance off a main road.
	8	Typically you will have a spring and fall letting because of how the budget works.			
RAWDATA TAB					
	1	Enter all new data from evaluation road trip. Make sure all data was entered throughout the year for each item to the right in the Updating Throughout the Year section.			
	2	Adjust the upcoming year's plan to include any work that did not get done last year. Make decisions and continue to adjust the upcoming years' plans so the budget is slightly higher than what you think you will get. Budget goal is $10,000 per total mile of roads.			
	3	Hide the previous year's plan and cost columns and add two new columns to keep a five year projection going. DO NOT DELETE THESE COLUMNS. THIS IS YOUR HISTORICAL DATA.			
	4	Once all data is entered, you can sort by weighted index to see what roads are the worst. The higher the number the worse the road.			
	5	Then you can evaluate based off the projections to see if adjustments need to be made.			
	6	Adjust the projections based off projected budgets and add roads to the 5th year column that you added.			
	7	Then use the color coding for this year's plan to organize what you will do in the spring and fall.			
	8	Striping is at the bottom of the sheet in purple. You want to paint all lines every year. You will have a little fluff to do touch up work on thermo. You want to paint all lines and thermo hand work every 3 years.			
BUDGET TAB					
	1	Use the refresh button to update this sheet.			
	2	Hide the columns for the previous year. DO NOT DELETE THIS PIVOT TABLE/COLUMNS.			
	3	Add a pivot table for the '5th' year or new year you added to the RAWDATA sheet.			
	4	Adjust the coding for the refresh button to include the pivot table you just added.			
	5	You can hide the Length columns if you would like for your presentation. I added these so I could evaluate how much of our road network that I am touching each year.			
	6	If you click on a dollar amount, it will show you the exact roads that make up that amount. This is why using pivot tables is important.			
	7	If you click on a dollar amount, the roads will pop up in a new tab. You can delete this new tab and no data will be lost. When closing the spreadsheet, only have the 4 standard tabs showing.			
OPTIONS TAB					
	1	Every even year (ie. 2016, 2018,…) update and adjust the estimated cost/sy as these prices are ever changing.			
	2	Make sure that if you add a new option (ie. Wedge and Level) that it is included in your formulas in the RAWDATA sheet.			
SUBDIVISION TAB					
	1	This tab will self populate. All you need to do is refresh the sheet. This is good for high level review for the Director of PW in comparing subdivisions.			
RANKINGS TAB					
	1	This tab is for organizing the roads you want to resurface or reconstruct for a given year. There is always more work that you want/need to do than the budget allows. This will allow you to organize and visualize just those specific roads. It will also give you an overview when presenting to the Mayor.			
MAP FORMATTING TAB					
	1	This has just the columns needed for the MPO to update their GIS maps.			
LTAP TAB					
	1	This has just the columns requested by LTAP for their data collection.			

NOTE This is a live document and keeping the history columns updated will help you gather historical data. The archived files will help with this as well. Besides helping you stay organized, this spreadsheet will allow you track the history of the road and the life expectency of all our roads.

Hancock Pavement Management Plan

Objectives and Measures

A. Hancock County's performance goals and expected level of service for pavements.

It is the Hancock County's goal to maintain poor roads at less than 15%

And

It is the Hancock County's goal to continue to use the Inventory and Condition ratings to extend the life of the county's pavements.

And

It is the Hancock County's goal to keep as many roads in fair condition in fair condition and the keep as many roads in good condition in good condition by applying pavement preservation techniques. It is also part of the Hancock County's goals to move as many poor roads to good condition through rehabilitation and reconstruction.

B. The Rating System.

The rating system used to provide condition ratings for the roads is PASER. The PASER system was developed by the Wisconsin LTAP and is utilized statewide by local agencies in Michigan, as well as many others throughout the country and is the system taught by the Indiana LTAP.

C. The process used to develop a work plan.

The Hancock County created the road inventory by breaking the roads into segments using the following criteria:

1) *From Intersection to Intersection*
2) *Where the width of the road changed or the number of lanes changed.*
3) *Where material type of road changed (ie. Asphalt, Concrete, Gravel, Seal Coat).*

The lengths of the road segments where determined from (GIS, Google Earth, Wheel measured). The width of the roads where determined from (Google Earth, wheel measured, tape measured).

The process for the collection of the condition ratings included (a print of our road inventory and writing the condition ratings as we surveyed the roads, or using our laptop and putting the condition ratings right into our GIS map for each segment.

The condition Assessment was performed by Randy Moore. It took them approximately 250 hours to perform the assessment."

D. The monitoring program and plan for making updates and adjustments.

"In order to capture the rate of deterioration of the Hancock County's roads as well as to capture the effectiveness of the pavement preservation treatments the condition ratings will re-evaluated on yearly basis

E. Drainage and ROW conditions.

The Hancock County's Right of Way (ROW) information is stored in our GIS system. For specific widths and locations please refer to our GIS map. Prior to any project the Hancock County will acquire any additional ROW required to complete the project. During the project development phase, any drainage area in the project limits will be evaluated and addressed and corrected if need be during design and construction."

"The Hancock County has limited ROW on most of the roads. Drainage on these segments is generally good with about 15% having poor drainage due to lack of ditches. Some of the segments have curb and gutter and drainage is adequate on these sections."

Please find attached the Town of Cumberland, Indiana, PASER rating table 1 and Asset Management plan Table2 for 2020-2024 attached.

- Additional requirements outside the tables are:
  - **Define performance goals**

    To utilize a map based data system (GIS) to formally track the performance of our maintenance activities as well as various levels of re-construction projects, for both roads and bridges. We will continue to refine our maintenance activities and priorities based on ratings of our bridges and roads.
    Chip and Seal = 5 years of Performance before re-seal
    Reconstruction = 20 -30 years with periodic maintenance by not letting the PASER rating drop below 5 before proper maintenance.
    Safety = To achieve a significant reduction in traffic fatalities and serous injuries on all public roads.
    Infrastructure condition = To maintain the Town's highway asset in a state of good repair.
    System reliability = To improve or maintain the efficiency of the surface transportations system.
    Environmental Sustainability = to enhance the performance of the Town's transportation system while protecting and enhancing the environment.

  - **Define pavement rating system**

  - We utilized the PASER rating system for Roads (Asphalt, Composite, Concrete and Gravel) We plan to re-rate every 2 years.

    The **PASER scale** is a 1-10 **rating system** for road **pavement condition** developed by the University of Wisconsin-Madison Transportation Information Center. **PASER** uses visual inspection to evaluate **pavement** surface conditions.
  - **Describe the process used to develop the treatment plan**

    We continue to monitor what works best for us and is cost effective, based on the conditions and the ratings and best practices. With the PASER system we plan a more effective program that addresses pavements while they are still in good condition. A cost-effective treatment in a timely manner will restore the pavement almost to the original condition. By doing so, the cumulative costs of such treatment are substantially less then reconstruction or major rehabilitation over the life of the pavement. In addition, the disruption of traffic is less for more frequent and minimal treatments in comparison to larger construction treatments.
    New Construction
    Reconstruction
    Rehabilitation (Pavement Preservation)
    Preventive Maintenance (Pavement Preservation)
    Routine Maintenance (Pavement Preservation)
    Corrective Maintenance
    Catastrophic Maintenance.

  - **Describe your monitoring program; and**

- Currently we are planning to utilize the PASER system to re-rate roads on a every other year scenario, but may institute an annual rating as we get more personnel trained in the analysis. We will also monitor during are various maintenance activities in and around the Town
- **Describe drainage and right of way conditions**
- We have an annual road edging program to ensure pavement to earth shoulder transitions are safe and we have positive drainage from the edges of pavement eliminating potential edge distress of our roadways. Overall conditions throughout the Town are good to excellent.

City of Greenfield
Pavement Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

A key component to any kind of planning process, whether it is a retirement plan or an exercise work out plan, is to set some goals, performance measures, or targets.

It is the goal of the City of Greenfield to assess and improve our street conditions. The City has many streets which are rated less than 5, and a few rated 9 or 10. Our goal is to preserve the higher rated streets as well as improve the 4s and 5s before their conditions deteriorate to the point of requiring complete reconstruction.

B. Define the Rating System.

Define the pavement rating system. Somewhere in your narrative, how your roads where assessed should be explained. Some agencies even copy and paste what the descriptions of the ratings here as well.

"The rating system used to provide condition ratings for the roads is PASER. The PASER system was developed by the Wisconsin LTAP and is utilized statewide by local agencies in Michigan, as well as many others throughout the country and is the system taught by the Indiana LTAP."

C. Describe the process used to develop a work plan.

This section should describe how and why the segments of roads where created and the process for the data collection. Ideally a new staff member could read this section and know what they need to collect the data in the future as well as be able to recreate the road inventory if needed.

"The City of Greenfield created the road inventory by breaking the roads into segments using the following criteria:

1. *From Intersection to Intersection*
2. *Where the width of the road changed or the number of lanes changed.*
3. *Where material type of road changed (ie. Asphalt, Concrete, Gravel, Seal Coat).*

The lengths of the street segments were determined by field measurements as well as utilizing our GIS system.

The process for the collection of the condition ratings included utilizing a print of streets and writing the conditions as well as utilizing a laptop to input data into a spreadsheet and import into our GIS system.

D. Describe the monitoring program and plan for making updates and adjustments.

An Asset Management Plan is a living and breathing document that needs to be updated periodically. This section is intended to describe the methodology in updating the condition ratings, the 5 year plan, and the objective and measures. An agency could develop different rating schedules for different routes. Primary roads or roads with high ADT's could be rated more frequently than an agencies local roads…

The City of Greenfield will update ratings and treatments each year as work is completed. The Street department and GIS department personnel will work together to update streets where work is not scheduled.

E. Describe drainage and ROW conditions.

Part of House Enrolled Act 1001 required asset management plans to include drainage and ROW. This could be done in a general statement or with each segment of road.

The City of Greenfields database of PASER ratings includes shoulder condition whether it is curb & gutter or shoulder. The majority of our streets are curbed with closed drainage systems. As streets are scheduled for resurface or maintenance, the engineering and street departments work closely with utility maintenance to identify and correct drainage issues within the limits of the scheduled work.

Town of McCordsville
Pavement Management Plan

Objectives and Measures

A. Define the Agency's performance goals and expected level of service for pavements.

A key component to any kind of planning process, whether it is a retirement plan or an exercise work out plan, is to set some goals, performance measures, or targets. Ideally "Performance Goals" and Target Levels of Service" are measureable so one can track progress towards them or away from them.

It is the Town of McCordsville's goal to keep as many roads as possible in fair condition. Road classification will also be considered in setting a priority of the roads in need of maintenance. Federal aid projects and Community Crossings will also be utilized to maximize the use of the available funding.

B. Define the Rating System.

Define the pavement rating system. Somewhere in your narrative, how your roads where assessed should be explained. Some agencies even copy and paste what the descriptions of the ratings here as well.

The rating system used to provide condition ratings for the roads is PASER. The PASER system was developed by the Wisconsin LTAP and is utilized statewide by local agencies in Michigan, as well as many others throughout the country and is the system taught by the Indiana LTAP.

C. Describe the process used to develop a work plan.

This section should describe how and why the segments of roads where created and the process for the data collection. Ideally a new staff member could read this section and know what they need in order to collect the data in the future as well as be able to recreate the road inventory if needed. This section should also describe any resources used, software, number of people it took to collect the condition ratings and the amount of time.

Annually, the Town Council approves an eight year capital projects plan. The plan will have been reviewed and approved by the Public Works Committee before going to the Town Council for final approval. The plan is initially developed by staff through a series of budget meetings prior to being presented to the Public Works Committee or the Town Council. Before staff meets, the asset management plan is updated by the Town Engineer and the Public Works Commissioner. An initial draft of project priorities is put together based on the road rating updates and the previous year capital projects plan. Costs for individual projects are estimated and along with the project priority list taken into staff meetings to discussion.

The Town of McCordsville created the road inventory by breaking the roads into segments from Intersection to Intersection. The lengths of the road segments where determined from GIS. The width of the roads where determined from either GIS or by wheel measure.

The process for the collection of the condition ratings included a print of our road inventory and writing the condition ratings as we surveyed the roads.

The condition Assessment was performed by Mark Witsman and Ron Crider. It took them approximately 20 hours to perform the assessment.

D. Describe the monitoring program and plan for making updates and adjustments.

An Asset Management Plan is a living and breathing document that needs to be updated periodically. This section is intended to describe the methodology in updating the condition ratings, the 5 year plan, and the objective and measures. An agency could develop different rating schedules for different routes. Primary roads or roads with high ADT's could be rated more frequently than an agencies local roads. This section should describe when the next time the ratings need to be conducted as well as describe the interval in performing the condition assessment.

In order to capture the rate of deterioration of the Town of McCordsville's roads as well as to capture the effectiveness of the pavement preservation treatments the condition ratings will re-evaluate at least every 2 years.

E. Describe drainage and ROW conditions.

Part of House Enrolled Act 1001 required asset management plans to include drainage and ROW. This could be done in a general statement or with each segment of road.

There are two main drainage and ROW conditions in McCordsville, developed and undeveloped. Developed areas include a stormwater system and a dedicated ROW width appropriate to the Thoroughfare Plan. Undeveloped areas have narrow ROW and the drainage is dependent on field tiles, culverts and open ditches.

PAVEMENT ASSET MANAGEMENT PLAN
NEW PALESTINE, INDIANA
EXECUTIVE SUMMARY

INTRODUCTION:

This project includes the completion of a Pavement Asset Management Plan (PAMP) for the Town of New Palestine. The purpose of the Pavement Asset Management Plan is to create a plan satisfying the Indiana Department of Transportation (INDOT) and HB1001 State funding requirements. Completion of the PAMP will allow officials with New Palestine to submit applications in their pursuit of Community Crossings Matching Grant funds. The PAMP includes a complete pavement inventory of New Palestine.

PROJECT AREA:

The PAMP covers streets within incorporated areas of the Town of New Palestine; except those controlled by the Indiana Department of Transportation.

INTRODUCTION TO PASER:

The Pavement Surface Evaluation and Rating (PASER) system was used for evaluating the condition of pavement surfaces for asphalt, concrete, and gravel.

The PASER system visually evaluates the condition of road segments. The PASER system rates each segment on a scale of 1 – 10 with 1 being the worst condition and 10 being the best condition (new pavement). Ratings of 1 to 3 indicate Poor Condition, 4 to 5 represent Fair, and 6 to 10 represent Good Condition.

PASER also recommends needed maintenance or repair, based on the condition of the roadway.

The purpose of the pavement inventory is to provide the Town of New Palestine an accurate assessment of their current roadway condition and help guide upcoming roadway maintenance and repairs. Information collected using the PASER system provides a building block for understanding existing conditions of pavement surfaces within New Palestine. It also provides a means for predicting how pavement conditions may change during a time period allowing for the implementation of pavement maintenance strategies to maximize the level of service and remaining service life for New Palestine's pavement surfaces

FIELD WORK METHODOLOGY:

During the first quarter of 2019, a complete pavement inventory on all Town of New Palestine's public streets was initiated and completed. Each roadway segment was driven, width measured, and distresses noted. The individual ratings were conducted by Town staff. The data collection team was looking closely at each roadway segment for surface defects, such as raveling or polishing, surface deformation, such as rutting or

rippling, cracks and areas of patching. At the end of the segment, the data collector documented on a data collection field form the factors that resulted in the segment's rating. All segments were entered into a spreadsheet that will allow for easy data presentation.

A single PASER rating was conducted for every public street segment evaluated with every street being rated at least once. During the field work, the objective was to rate the condition representing the majority of the roadway. This resulted in the completion of 129 individual ratings. Individual ratings can be viewed on the maps in Appendix B. At each rating location the following information was collected:

1. Designation
2. Roadway – Name and Suffix
3. From – Name and Suffix
4. To – Name and Suffix
5. Length – Miles
6. Number of Lanes
7. Width – Feet
8. Surface Type – asphalt, concrete, gravel, etc.
9. Rating (using 10-1 PASER Rating Scale)
10. Drainage Characteristics
11. Drainage Condition
12. Observed Traffic Conditions – Light, Medium, Heavy
13. Year Rated
14. Functional Classification

No inspections were completed on private roads, roads under the jurisdiction of INDOT, or gravel roads.

RESULTS:

According to the PASER methodology, a pavement is rated a 10 when it has been rehabilitated or reconstructed, and it only remains a 10 for one year. The following table generally summarizes the PASER rating scale with recommended maintenance activities:

Rating	Condition	Recommended Maintenance Activity
6-10	Good	Routine Maintenance
4-5	Fair	Preventive Maintenance
1-3	Poor	Reconstruction

As previously mentioned, 129 individual ratings were completed along the road network for the Town of New Palestine. A summary table showing the collected individual ratings for the project can be viewed at Appendix A. Maps showing a breakdown of the ratings by condition (good, fair, and poor) can be viewed at Appendix B.

OBJECTIVES AND MEASURES:

It is the intent of the Town of New Palestine to use the inventory and condition ratings from 2019 to develop a Pavement Management System that helps to extend the life of the Town's street infrastructure. A Pavement Management System was developed for 2020-2024 and is visually depicted on the attached Proposed Treatment Option Maps found in Appendix B.

The data collection was completed in the first quarter of 2019, the Pavement Surface Evaluation and Rating (PASER) system was used for evaluating the condition of pavement surfaces for asphalt, chip seal, and concrete. The inventory and condition ratings are attached in Appendix A of this document.

The PASER system visually evaluates the condition of road segments. The PASER system rates each segment on a scale of 1 – 10 with 1 being the worst condition and 10 being the best condition (new pavement). Ratings of 1 to 3 indicate Poor Condition, 4 to 5 represent Fair, and 6 to 10 represent Good Condition.

The Town of New Palestine completed the road inventory by breaking the streets into segments using the following criteria:

1) From Intersection to Intersection.
2) Where the width of the road changed, or the number of lanes changed.
3) Where material type of road changed (ie. Asphalt or Concrete).

A single PASER rating was conducted for every public street segment evaluated with every street being rated at least once. During the field work, the objective was to rate the condition representing most of the roadway. The lengths of the road segments were determined from Google Earth.

Each roadway segment was driven, width measured, and distresses noted. The data collection team looked closely at each roadway segment for surface defects, such as raveling or polishing, surface deformation, such as rutting or rippling, cracks and areas of patching. At the end of the segment, the data collector documented on a data collection field form the factors that resulted in the segment's rating. All segments were entered into an Excel spreadsheet allowing for easy data presentation.

PROPOSED TREATMENT OPTIONS (2020-2024):

Left alone pavements will typically deteriorate over time at an ever-increasing rate. Maintenance and rehabilitation can slow or reverse this deterioration. The degree to which this occurs is dependent on the type of maintenance or rehabilitation as well as the timing of such actions. In general, an early and systematic maintenance and rehabilitation plan is the most cost effective and results in the greatest extension of useful pavement life. Maintenance items such as crack sealing and seal coating are low cost treatments

that can be performed on higher PASER rated roadways to keep the pavement in good condition and extend the overall life of the pavement.

Historically, New Palestine's strategy with maintenance activities on its streets is to overlay or reconstruct portions of their facilities; as needed. No other type of maintenance activity is currently implemented. Officials in New Palestine allocate the Town's limited resources to address its worst conditioned streets. This policy focuses on streets having a PASER rating of 1-5 or those facilities that are in poor to fair condition.

The typical budget for roadway maintenance activities in New Palestine is approximately $110,000 annually; exclusive of additional funding received by INDOT or the Indianapolis Metropolitan Planning Organization. This budget will be applied to develop the 2020-2024 maintenance program for New Palestine. Officials with New Palestine budget approximately $30 per foot for HMA overlays Based on recent roadway rehabilitation projects, approximately 3,600 feet (0.69 miles) of roadway will be treated annually.

With these assumptions, the following tables show the proposed maintenance plan for New Palestine during 2020-2024. Proposed projects for the plan years can be seen on the Proposed Treatment Option Maps located at Appendix B.

Road Treatment Summary – 2020

Year Rated	Rating	Treatment Used	Estimated Cost per foot	Estimated Miles	Estimated Cost
2019	1-5	Resurfacing	$30 per foot	0.85 miles	$134,640

Road Treatment Summary – 2021

Year Rated	Rating	Treatment Used	Estimated Cost per foot	Estimated Miles	Estimated Cost
2019	1-5	Resurfacing	$30 per foot	0.66 miles	$104,544

Road Treatment Summary – 2022

Year Rated	Rating	Treatment Used	Estimated Cost per foot	Estimated Miles	Estimated Cost
2019	1-5	Resurfacing	$30 per foot	0.83 miles	$131,472

Road Treatment Summary – 2023

Year Rated	Rating	Treatment Used	Estimated Cost per foot	Estimated Miles	Estimated Cost
2019	1-5	Resurfacing	$30 per foot	0.58 miles	$91,872

Road Treatment Summary – 2024

Year Rated	Rating	Treatment Used	Estimated Cost per foot	Estimated Miles	Estimated Cost
2019	1-5	Resurfacing	$30 per foot	0.76 miles	$120,384

RIGHT-OF-WAY:

New Palestine's right-of-way (ROW) information is stored in our GIS system. For specific widths and locations please refer to our GIS map. Prior to any project New Palestine will acquire any additional ROW required to complete the project. During the project development phase, any drainage area in the project limits will be evaluated and addressed and corrected if need be during design and construction.

New Palestine has limited ROW on most of the roads. Drainage on these segments is generally good with about 10% having poor drainage due to lack of ditches. Some of the segments have curb and gutter and drainage is adequate on these sections.

RECOMMENDATIONS:

The data collected and the tools developed through this study provide a baseline for the condition of the New Palestine roadway network at the time of this study. However, the conditions of roadways are always changing. New Palestine intends to make PASER evaluations a regular part of their maintenance program. Routine inspections should be performed and all pavements should be evaluated and conditions documented at least once every two years. The baseline information developed through this study, combined with data obtained through subsequent PASER evaluations will provide New Palestine with useful information on the adequacy of current roadway maintenance and reconstruction practices. New Palestine will evaluate their roadway system on a two year cycle with additional periodic updates to reflect completed construction projects.

Appendix C
5-year Treatment Plans

Hamilton County

Year	Rating	Treatment Used	Estimated Cost per Mile	Estimated Miles	Estimated Cost
2020	8-9	Crack Seal	5,400.00	44.77	241,758.00
2020	7-8	Concrete - Joint/Crack Sealing	4,200.00	0.79	3,318.00
2020	7	Fog Seal	4,800.00	19.23	92,304.00
2020	5-7	Chip Seal	7,800.00	98.82	770,796.00
2020	5-6	Concrete - Full Depth Repairs	84,000.00	0.24	20,160.00
2020	5-6	Mill and Overlay - 1.5"	139,400.00	15.93	2,220,642.00
2021	8-9	Crack Seal	5,508.00	23.98	132,081.84
2021	7	Fog Seal	4,896.00	12.13	59,388.48
2021	5-7	Chip Seal	7,950.00	49.41	392,809.50
2021	5-6	Mill and Overlay - 1.5"	142,150.00	24.52	3,485,518.00
2022	8-9	Crack Seal	5,600.00	16.74	93,744.00
2022	7	Fog Seal	5,000.00	12.13	60,650.00
2022	5-7	Chip Seal	8,100.00	49.41	400,221.00
2022	5-6	Concrete - Full Depth Repairs	87,400.00	0.05	4,370.00
2022	5-6	Mill and Overlay - 1.5"	145,000.00	19.63	2,846,350.00
2023	8-9	Crack Seal	5,730.00	18.44	105,661.20
2023	7	Fog Seal	4,460.00	12.13	54,099.80
2023	5-7	Chip Seal	8,270.00	59.31	490,493.70
2023	5-6	Mill and Overlay - 1.5"	148,000.00	19.91	2,946,680.00
2024	8-9	Crack Seal	5,850.00	35.81	209,488.50
2024	7	Fog Seal	5,200.00	9.98	51,896.00
2024	5-7	Chip Seal	8,435.00	62.89	530,477.15
2024	5-6	Mill and Overlay - 1.5"	150,850.00	17.25	2,602,162.50

Carmel

Year	Rating	Treatment Used	Estimated Cost per Mile	Estimated Miles	Estimated Cost
